No. 241

Nundidroog Division
Superintendent's Office
MYSORE COMMISSION Bangalore 12th February 1872.

Regn No 181

To

The Secretary to the
Chief Commissioner
of Mysore.

Sir

The Chief Commissioner having been pleased to direct me to take the position ~~of President of the Committee for the Cattle~~ Show, to be held near Nundidroog next month, I have the honor to submit, that in my opinion, the 12th of March would be the best day for it, as the feast of the Shevaratree commences on the 7th, and thus, 5 days will be allowed for the Cattle to assemble.-

2.- I would beg also to add, that if the Chief Commissioner, can give 500 Rupees this time, I think such prizes may be offered as will stimulate the people

to bring forward their best Cattle.

3. The Rules of last year seem suitable: the only portion [illegible] therefore of the Notification which it will be necessary to revise will be the Prizelist.

4. I would suggest that the Prizes for Cows and Heifers be allowed to stand high, as the very fact of Extra consideration being shewn for this class by the Committee, may induce owners to bring forward good ones.

5. I would beg to propose that the officers marginally noted be Members of the Committee, as also any others whom Colonel Meade may desire to nominate, and that the names of the Officers on the Committee, as finally decided by the Chief Commissioner, be Entered in the Notification.

6. Beg to Enclose a draft in Original forwarded to me by Colonel Roddam together with Copy of a Memorandum by Mr. Dykes to which it gave cover, but I am doubtful, whether Mr. Dykes' principle is good in this

* Colonel Roddam, Manager, Punjaub Exhibition.
Colonel Meade. — R. O. Fitzgerald Esquire
Major Campbell. — Mr. Macdonald Esquire
Major Cracroft Esquire. — Mr. Kardinegar.

Country, where it is not the practice of the people to feed up the Heifers and Cows in the same manner that they care for, and fatten, their young Bulls and Bullocks.

7. A list shewing the proposed Schedule of Prizes is appended.

I have the honor to be,
Sir,
Your most obedient Servant,

Supernintendent.

Total Rupees 500

The right of withholding any prizes is reserved by the Judges should the competitor is not considered deserving thereof.

To

The Offg. Secretary to the Chief Commissioner

of Mysore

Sir,

I have the honor to request you will submit to the Chief Commissioner the accompanying prize list for a Cattle Show which the Committee propose should be held at Kundy on the March immediately after the Shivarathri feast which Commences on the idem. Will you please obtain the Chief Commissioner's sanction for the Show, the disbursement of Rs. 300. and for the Notification in the Mysore Gazette and Circulars as on the last occasion.

In former correspondence I had the honor to bring to notice the fine Cows exhibited at the Cattle Show, and their never being shown at any of the provincial Cattle fairs, also the general indifference of the people to their Cows nurture and breeding. The Committee of the Nellore Cattle Show have also remarked on this defect. With a view to trying to induce the natives to exhibit Cows and turn their attention

to

to their breeding the Committee have entered more prizes in this Class.- Mr Dyke retired Madras Civil Service, formerly Collector of Nellore has written a letter to the East India Finance Committee, a Copy of which the Committee submit for the Chief Commissioner's information and would suggest that a portion of the letter, or its Summary, should be published for general information in the Mysore Gazette.-

The arrangements for the last Cattle Show made by Mr Kristnaiengar and the Assistant at Ballapore were excellent and need no modification. The Committee have named a date for the Show later in the feast than on the last occasion, which was on the 4th day of the feast and was found too early- the Cattle not being collected in full force -

I have the honor to be
Sir
Your most obedt Servt

On special Duty
President
of Cattle Show Committee.

The Burlington,
Cork Street, 3rd July 1871.

These Shows were instituted for the general improvement of the breed of cattle. The bulk of the prizes were however for some years given for Bulls. This distribution was in accordance with native ideas. It was the custom to feed up the young bulls for early sale as draught bullocks, and leave the heifers to get on as they could, and breed when strong enough.

The necessity for giving more prizes for cows and heifers, was brought to notice when the late Sir W. Denison was present at the Addaurki Show. The prize list was revised. Prizes were given for heifers of every age, and the value of the prizes for Cows was greatly increased. Subsequently seperate prizes were given for yearling stock, and stock under one year of age. And the Village Officers were directed to register the births and give certificates to be produced at the Shows.

In 1869 inquiries were made as to whether any effect had been produced by these measures in making the cattle

breed

breed at an earlier age. It was thought, when the heifers had been well fed from the day they were born, that they would hold over. The Tahsildar of Gingole reported that this was the case, and gave details as to the owners of the animals, their age etc.

In 1870 prizes were offered for cows under 5 years of age with calf at heel. There were no entries, but 4 heifers of 3 years of age and 23 heifers of 4 years of age were exhibited in calf, and the prizes I had offered was divided amongst the owners of the 4 heifers of 3 years of age in calf.

In the current year (1871) prize have been again offered for cows under 5 years of age, with calf at heel, and there have been successfull competitors at the two shows held at Addanki and Nellore respectively. At the Addanki Show 3 cows were exhibited 4 years of age with calf at heel. At the Nellore Show a month later, 6 cows were exhibited - 4 years of age with calf at heel.

The shows have therefore been eminently successfull in one respect. They have brought to notice a most important defect in the present system of breeding stock; and in showing

showing how this defect may be remedied they have had an effect that was never anticipated and is of more importance than any effect that was anticipated.

The ryots have been made to see what are the results of feeding up the heifers instead of giving the whole of their attention to the young bulls, and a step has been thus gained that may be of incalculable importance if duly followed up.

In an article in the Madras Weekly Mail of the 25th May last headed "Shows and Shams" an allusion is made to this important result. It does not appear from the official correspondence quoted that either the Collector or Mr. Thacker, the Veterinary Surgeon on special duty, or the Board of Revenue or the Government seem to have thought it worth while to notice the facts that the shows have pointed out a mode of indefinitely increasing the agricultural resources of the Country. The Government simply think that the results obtained are not "so discouraging" as the present Collector supposes, and the Board direct a series of inquiries to be made essentially inquisitorial and calculated to make the people afraid to improve their stock.

The existing order as regards

Pasture

pasture, and the opinions expressed by the Collector against the Shows, will have done much harm, but the publication of the opinions of the Collector by the Madras Government may be made of much use, if the Home Government should determine on reconsidering the order as regards pasture, and would take the opportunity when the correspondence on the cattle Shows come before them, of affirming that the obvious advantages of making cattle breed so much younger is a question that affects the Empire generally, and is one that they require shall be kept strictly in view by the local Authorities and local Governments. The progress that has been made has no chance of being steadily maintained unless it is thus supported.

[illegible]

[illegible] Secretary with reference

28-6-72

Report on the Cattle Show at Kandy on the 12th March 1872.

The Prize list accompanies this report.

Great numbers of excellent Bulls and Bullocks were exhibited on this occasion, and there appears to have been no misconception on the part of the natives about the object of the Government Show, such as created a panic at the first show - the natives eagerly contended for the prizes, and brought so many fine animals, that the Committee had considerable difficulty in selecting for the prizes where equality in excellence was contested.

As regards country bred horses and ponies, the show was again a very poor one, so much so, that the Committee withheld most of the prizes, and awarded them as an

encouragement to the people who brought good Cows and heifers. there was certainly an improvement in the number and quality of the Cows Exhibited, still much has to be done in this respect. While the natives neglect the nurture of the heifer and full grown Cow, and bestow all their care and the best forage and food on the young bulls.

At a future Cattle show, the Committee propose (1) that the prizes should be awarded according to the value of the Animals shown, not as before according to their age (2) that the show should be held at or near Bangalore (3) Considering that there were from 8 to 10,000 heads of Cattle brought to the fair, and that all the finest Animals were Exhibited, the Committee would beg leave to suggest that the sum of money given in Prizes should be increased to 500 Rs. at the next Cattle show.

The arrangements made by the Authorities on the spot, were

perfectly satisfactory.-

The Committee recommend that the Bull which gained the first Prize should be bought by Government and kept in the Lal Bagh for breeding purposes.-

Agri 1-72-1

Dear Sir

I am desired by Col. Meade to send you a small bottle of sunflower* oil, which I have had expressed from some seeds that Col. Elliot grew in his garden at Mysore.

The yield of seed was about 40 fold or a little more, and of the 50 seers he sent me (our Kristnaraj seer contains 71.5 C inches) I had 40 seers made into oil, from which after filtering it through blotting paper, we got about 6 quart bottles, or say 1 gallon, of fine oil, like the sample I send you.

Col: Meade desired me to send you a bottle demi officially and also one

to

* A species of Helianthus, N. O. Compositæ

to the agri-horticultural Societies of Calcutta and Madras, one to Coll. Boddam as Secy: of our Agri: Hort. Society, and one to our local Museum

I am &c.

Simla the 26 July 1872

Agri 1-7 2

General My dear Sir,

I have received your demi Official of the 18th instant, and beg that you will Kindly convey to Colonel Meade my thanks for the bottle of Sunflower oil which you have sent me at his request.

I shall feel much obliged if you will Kindly let me Know:

1. The price at which the oil can be turned out per gallon - all expenses included, that is rent of land, cost of culture, of reaping, preparing and pressing the seed, of cleaning the oil, and of

other

other similar processes.

2. The average number of gallons per acre likely to be produced; and.

3. The value of the refuse as fodder or cattle food.

I am,
Yours truly.

To
Lieutenant Colonel J. Pickle
Bangalor.

The further info: cannot be supplied with any accuracy. The seed was as stated from Supt. of Agri: in well watered garden ground with a yield per acre of 40 pd. The seed was expressed in a stone oil mill - 40 seers filling it. The straining was done in the office

through blotting paper.

Col Boddam may be asked to keep an account of the seed sown, & yield &c. and to keep such records of the subsequent operations as will enable the Chief Ck & Supply hereafter to form somewhat wholesale estimates.

I have no doubt the refuse of the oil will be useful as cattle food - also as manure - & Supply might be relieved & the Depr. Jail Manual the above effected.

W. Mure
2 Aug 1872.

Supply Note I regret that the Compound being here raised as a provisional experiment, no data are forthcoming to give the information asked for but that this will be done in time & Instructions now being issued to the Jail Officers concerned in the Course -

The Offg Secretary
to the Chief Commissioner of Mysore

Sir

I have the honor to forward an abstract of experiments in cultivating 1/4 of Sunnhemp with Sunflower, at Bangalore, as called for by the Agri Cultural Department.

Sunflower Cultivation will not I think, pay on average Ragi land in this part of Mysore - Soil is already very poor and manure expensive and not easily procured - The Sunflower exhausts soil & requires land full of nitrogenous matter, the process of cleaning the seed pre-existing oil is clumsy & costly and there is no market for it at present. But if a demand arose there are many parts of Mysore (Chikballapur Division for instance) where Sunflower Cultivation would pay -

European Coffee planters would begin to grow it on account its yielding so much potash when the stalks & are burnt - potash being a manure very valuable for Coffee Tobacco Cotton

As a Sanatary measure, it might be desirable even now, to encourage the ryots to grow Neem trees immediately about their fellay villages — on the upside lay at present overgrown with rank weeds — datura &c — The Neem tree is a great feeder & reputed to have the virtue of emitting Ozone & of absorbing malaria. The bodies pervading sunbeams is marked in Europe — In my own experience I cannot trace this act — the Cattle do not care for such food apparently — Partly relish the seed & eagerly the tree &c —

I have the honor to be

applied should be either poudrette or a compost as nearly approaching it as possible. 3rdly That the Sun-flower should be sown towards the end of the S.W. mon-soon as heavy rain rots the seed and much of the seed raised in these 3 experiments was destroyed by heavy rains. 4thly That the seed should be sown in drills and bullock-hoed, and that it is of great importance that the seed used for sowing should be carefully selected from the variety of Sun-flower which produces large seed-discs. I had to get seed in the first instance from different parts of Southern India and from Europe, and this mixed seed produced a great variety of Sun-flowers, some tall, some dwarf-a great many sorts produced flowers with large florets and very small discs giving scarcely any seed, these are worthless for cultivation.

No value is given in my account of the large quantity of potash resulting from burning the refuse of the stalks, which is a very valuable manure for Coffee and Tobacco plants, or of the Oil cake which should be of some value as Cattle food, at least equal to that of the Sesame oil plant. Some simpler and more economical way of cleaning and preparing the seed for the oil Mill must be adopted.

As regards fodder, I could not found the Cattle of Mysore take to the leaves of the Sunflower so readily as is stated in Europe. Cows and bullocks do not care to eat the leaves. If the crop is kept for seed, the heat of the Sun shrivels up the leaves by the time the seed is harvested.

Bangalore
29th March 1874

at Bangalore, in 1873

Remarks

Six ~~lbs~~ of Giant Russian Sunflower seed was imported and sown on an acre of good Raggi land, the yield being 1800 seers yielding 50 Gallons of oil.-

This Sunflower is a very much larger Plant than that of the Country, growing from 7 to 8 feet in height, and bearing one large head. I measured six of the heads taken from one plot of average growth:

No 1. 35 Inches in circumference. Weight 3 lbs. 1875 Seeds.
" 2. 29 " " 1 lb. 4 oz. 1427 Seeds
" 3. 27 " " 1 " 4 " 1140 "
" 4. 27 " " 1 " 4 " 1202 "
" 5. 27 " " 1 " 970 "
" 6. 25 " " 1 " 1102 "

And these seeds are nearly double the size of the Country sort.

The leaves were also dried and pounded. about 500 lbs of such dry fodder realised which used mixed with meal and bran for cows, is good food for milch Cows, and will keep a long time.-

The seed was first husked by Women and converted into Coarse meal, 20 seers of raw seed making 9¼ of meal, and this was then pressed for oil. Fifty seers of the meal yielding three gallons of oil and 35 lbs of oil cake.-

The Empty seed heads and stalks make fine fuel which subsequently yields ten Cwts. of ashes very rich in potash, excellent manure for Coffee and tobacco.-

The stalks are said to be used in China for fibre to mix for the China Grass cloth.-

I have valued the oil this time at nine Annas instead of twelve Annas per quart, and with the view to ascertaining its market value a large quantity has been sent for Experiment and report to the Agent and Manager Madras Railway Company, also to the Commissariat and Ordnance Departments, Bangalore Central Jail, Cubbon Hotel Keeper, & Government Printing Press, and these Departments have been requested to furnish a report of the results of their experiments, and what price they would give per Gallon for the oil.-

* The item 12 Rupees incurred for watching the Crop is an extraordinary Charge, the land available being unenclosed and near the native town, the flowers were liable to be stolen

Thick jet. I should be getting over this prejudice to any thing here.
23/6.
W Aitken

Agri 1-12-18

The report is not a very encouraging one as it shows that the oil is not to be used for general purposes as was believed.

I doubt very much if it would be profitable to introduce any improved method of expressing the oil without first ascertaining that it would be worth while to do so. But enquiry might be made as to the modes of doing this in Italy.

The report will be sent on with the letter from Capt

23.6.74

I believe the native method of extracting oil from seeds cannot be improved upon. It would be of use getting improved machinery for the sun flower although Col. Boddam suggests the native methods.

No 23

Bangalore
19th June 1874

To
The Secretary to the Chief Commissioner
of Mysore

Sir,

I have the honor to enclose an original letter from the Agent & Manager of the Madras Railway requesting that the Lamplamer Oil sent him, for stated reasons is not suited to Railway purposes. For the same reasons the oil is not approved of by the Commissariat Department at Madras - this was then for lubricating steam machinery. The Ordnance Department at Bangalore state that the oil will answer for the purposes required with Annual, but as to the price - the Inspector General of Ordnance and Magazines would not be prepared to purchase it unless at a reduced rate - Rangoon oil is now used being cheaper. The Light of the Central Jail used it for paint but found that in its present state it dries too slowly this he could rectify by having the oil clarified by boiling with lead

He considers Neat's foot oil very good and that it could be applied in many ways — The proprietor of the Carlton Hotel pronounces unfavorably on it for cooking purposes, while another & independent dealer, that the oil is heavily superior to olive oil for culinary purposes & burns well without giving off smoke — None of the persons to whom the oil has been sent seem to have thought of trying it mixed with other oils — I am informed that in Italy sunflower oil is largely used for adulterating olive oil which it so closely resembles. I also think that the cost of expressing the oil could be reduced and it was suggested that the natives would make it extensively, as it is superior to the Cocoanut oil they now use in cookery

Neat's foot was expected in the rude nature will —

and the only way I could kill the deeds was troublesome and somewhat wakeful. I should think that in Italy they must have some way of making the evil both cheaper and better

Agent and Manager.

Madras Railway
Loco. Superintendent's Office
Perambore Works 6th June 1874.

No 224.

To

The Agent and Manager

Dear Sir,

Sun Flower Oil.

Referring to the correspondence noted in the margin, I beg to inform you that I have given the sample of Sun Flower Oil a series of trials on both our Locomotive Engines and the Machinery in our Shops, and I find that this oil will not answer at all for our Locomotive Engines, as it has little body and passes so rapidly through the syphons, though tightly trimmed, that they are emptied during a short run. This, I need scarcely point out, would be a most serious inconvenience on fast-running trains. On trying this oil on our Shop Machinery I find that the consumption is more than four times greater than that of Castor Oil, and constant attention is required to the Bearings to prevent them from running dry. This on a large Shop would involve considerable expense and trouble.

From Col. C. Reddam, on Special duty abyssinia Commission, to Agent & Manager, S.I.R. — 17th Nov 1873.
